"The Wine Construction"
20-27th June 2011
Porto - Portugal

■ Enhancing functional biodiversity in Douro Wine Region vineyards

The experimental work began in 2010 and is being developed following an action plan that aims to:

- a) identify potential ecological infrastructures (EI) already existing on the farm
- b) identify management strategies aimed at the maximization of ecosystem services provided by these EI

Cluster dos Vinhos da
Região do Douro

■ 2010 – Analysing Biodiversity in different ecological infrastructures and vineyards

Cluster dos Vinhos da
Região do Douro

■ 2011 – Effects of landscape structure and cover crops on natural enemies of EGVM

Pupa de díptero taquinídeo

Pupa parasitada por fungo entomopatogénico (*Beauveria bassiana*)
